## SAVAGE SPEEDRIDER

**SAVAGE - definitely the best fun!**  
Swing has been developing a speed glider over recent months, and it has far surpassed even the wildest expectations: the Savage! Any speedrider pilot who has taken it for a test has made comments like "Just awesome! Really cool! Totally hot!" In short, it is the best speedrider available on the market.

We have listened to pilot feedback...

**You won't believe it!** -- this was our development team's motto. Swing has remained true to the basic principles it applies for all its gliders, and has used only high-quality materials for this unique concept. The Savage has very good launch behaviour for all types of launch. There is no tendency for it to twist or hang back as it launches. Sorting the lines is also very easy thanks to the excellent choice of materials.

**More fun but take it slowly**  
The large range of glide ratio achievable and the increase in 'dive' and 'speed'(which can be altered using the trimmers and brakes to suit the pilot's level of ability) guarantee that pilots will have much more fun with this glider. We recommend that pilots progress slowly towards the top performance offered by the glider.

SAVAGE	10	12	13
Homologation	EN 926-1 in process		
classification	Expert	advanced	beginner
cells	17	17	17
wing area (m <sup>2</sup> )	10,0	11,5	13,0
wing area projected (m <sup>2</sup> )	8,80	10,11	11,42
wing span (m)	5,62	6,02	6,42
wing span projected (m)	4,65	4,95	5,28
aspect ratio	3,16	3,16	3,16
aspect ratio projected	2,45	2,45	2,45

**Internal pressure shifts / Roll not a problem with this glider**

The extremely stable and well-behaved canopy does not create any concertina movement due to internal pressure shifts even at high speed or when turning. It holds its path and there is no difficulty with the canopy rolling.

**Diving, descending exactly as it should be**  
Accurate steering using the brakes even allows you to 'dive' using this glider. No other glider on the market can do this. A true contour flight using the brakes is no problem.

**Out of control ? 70% Brake**  
Energy from speed is converted perfectly into lift, allowing pilots to climb almost vertically if confronted with obstacles or if dangerous situations arise. The Savage is unbelievably easy to flare and exhibits the best possible landing characteristics.

**"I do all my own stunts..."**  
The Savage is available in three sizes: 13 = beginner, 12 = advanced, 10 = expert, making it the one and only glider for the speedriding enthusiast.

The Savage, the new "Brave" harness and a separate speed bag are available now at an extremely attractive price.

**You won't believe it!**
