CONNECT LIGHT 2

COMFORT LIGHT!

Light in weight but high on comfort

The CONNECT LIGHT 2 builds on the great success enjoyed by the CONNECT LIGHT. We have been very pleased with the harness geometry of our new CONNECT 2 (harness with foam protector), and this is incorporated in the CONNECT LIGHT 2. You will notice how comfortable it is the very first time you try it.

With the CONNECT LIGHT 2, the inlet is no longer under the seat. Instead a side ram-air inlet is used to inflate the Cygnus Airbag. This means the airbag also offers a high level of protection during launch (tested according to the latest DHV guidelines).

The same Austria Alpin buckles are used as on the earlier model, and we have kept the large rear storage pocket. There is a wide opening for the reserve chute container, which makes reserve deployment much easier. The design has been altered according to these changes, and its elegant simplicity makes it very appealing.

We have managed to keep down the weight of the harness by carefully selecting materials which are light-weight yet durable.

The CONNECT LIGHT 2 can be used in a variety of situations. It is suitable for long cross-country flights and for extended trips to special places away from crowded flying sites, given that it has a very comfortable design and aerodynamic form, yet is still light-weight and small.

Design details for the SWING CONNECT LIGHT 2:

- Cygnus Airbag with ram air inflation
- Lightweight carbon fibre seat
- New style "multi-panel" reserve container (to ensure easy deployment) integrated under the seat
- A range of adjustment options (seat and back)
- Large rear storage pocket with attachment point for walking sticks (max. length 60 – 65cm)
- Side net pockets, accessible during flight
- redefined harness and seat geometry resulting in an excellent level of flying comfort
- manufactured from durable, abrasion-resistant CORDURA fabric by DuPont
- redesigned reserve system integrated under the seat with side release for foolproof RS release
- Austria Alpin Cobra buckles, Safe-T-Bar leg strap system
- Austria Alpin mini pulleys for speed system
- various adjustment options (seat and back)
- aerodynamic design
- signalling whistle on the chest-strap
- optional relax bar
- DHV certification up to 120 kg load

Sizes available

M = 155 - 170 cm

L = 170 - 185 cm

XL = 185 - 200 cm

Weight incl. Carabines
(depending on size)

3,3 up to 3,5 kg
